C6 Rate and Extent of Chemical Change – Knowledge Organiser: Self-Test

AQA GCSE Chemistry • Set 1: Rates of Reaction **Paper 2**

#	Question	Attempt 1	Attempt 2	Attempt 3	Answer
1	Mean rate equation				Quantity used or made ÷ time
2	Units of rate				g/s or cm^3/s (mol/s)
3	Rate at a point on a graph				Gradient of the tangent
4	Five factors affecting rate				Concentration, pressure, surface area, temperature, catalyst
5	Collision theory				Particles must collide with enough energy
6	Activation energy				Minimum energy for a collision to react
7	Catalyst				Speeds up a reaction without being used up
8	How a catalyst works				Different pathway with lower activation energy
9	Enzymes				Biological catalysts
10	Rate is proportional to				1/time

Fold the Answer column behind the page. Answer each question from memory, then unfold and check. Repeat on a later day in the next Attempt column.

C6 Rate and Extent of Chemical Change – Knowledge Organiser: Self-Test

AQA GCSE Chemistry • Set 2: Reversible Reactions and Equilibrium **Paper 2**

#	Question	Attempt 1	Attempt 2	Attempt 3	Answer
1	Symbol for a reversible reaction				⇌
2	Example of a reversible reaction				Ammonium chloride ⇌ ammonia + hydrogen chloride
3	If forward is exothermic, the reverse is				Endothermic (same amount of energy)
4	Heating blue hydrated copper sulfate gives				White anhydrous copper sulfate + water
5	Dynamic equilibrium				Forward and reverse rates are equal
6	Condition needed for equilibrium				Closed system
7	Le Chatelier's principle				System shifts to counteract a change
8	Effect of a catalyst on equilibrium position				None
9	Apparatus to measure gas volume				Gas syringe
10	Precipitate in the disappearing cross reaction				Sulfur

Fold the Answer column behind the page. Answer each question from memory, then unfold and check. Repeat on a later day in the next Attempt column.
