C6 Equilibria – Knowledge Organiser: Self-Test

AQA A-level Chemistry • Set 1: Dynamic Equilibrium and Le Chatelier **Papers 1 & 2**

#	Question	Attempt 1	Attempt 2	Attempt 3	Answer
1	Dynamic equilibrium				Forward and reverse rates equal; concentrations constant
2	Condition needed to reach equilibrium				Closed system
3	Symbol for a reversible reaction				⇌
4	Le Chatelier's principle				Equilibrium shifts to oppose a change
5	Effect of a catalyst on equilibrium position				None
6	Effect of a catalyst on time to reach equilibrium				Shorter
7	Homogeneous equilibrium				All species in the same phase
8	Two disadvantages of high pressure				Expensive and hazardous
9	Equation for hydration of ethene				$C_2H_4(g) + H_2O(g) \rightleftharpoons C_2H_5OH(g)$
10	Catalyst for hydration of ethene				Phosphoric acid (H_3PO_4)

Fold the Answer column behind the page. Answer each question from memory, then unfold and check. Repeat on a later day in the next Attempt column.

C6 Equilibria – Knowledge Organiser: Self-Test

AQA A-level Chemistry • Set 2: Equilibrium Constant K_c **Papers 1 & 2**

#	Question	Attempt 1	Attempt 2	Attempt 3	Answer
1	K_c for $aA + bB \rightleftharpoons cC + dD$				$[C]^c[D]^d \div [A]^a[B]^b$
2	Meaning of square brackets				Concentration in mol dm^{-3}
3	Only factor that changes K_c				Temperature
4	Effect of concentration on K_c				None
5	Effect of pressure on K_c				None
6	Effect of a catalyst on K_c				None
7	K_c much greater than 1				Equilibrium lies to the right
8	K_c much less than 1				Equilibrium lies to the left
9	Equation for methanol production				$CO(g) + 2H_2(g) \rightleftharpoons CH_3OH(g)$
10	Conditions for hydration of ethene				300 °C, 6 MPa

Fold the Answer column behind the page. Answer each question from memory, then unfold and check. Repeat on a later day in the next Attempt column.
