RP5 Distillation of a Product – Knowledge Organiser: Self-Test

AQA A-level Chemistry • Set 1: Distillation of a Product **Paper 2**

#	Question	Attempt 1	Attempt 2	Attempt 3	Answer
1	Apparatus to separate a volatile product				Distillation
2	Direction of water flow in a condenser				In at bottom, out at top
3	Why water enters at the bottom				Condenser fills completely
4	Why anti-bumping granules are added				Smooth boiling
5	Position of the thermometer bulb				At the side-arm junction
6	Why the receiving flask is cooled in ice				Reduces evaporation of product
7	Why the apparatus is not sealed				Prevents pressure build-up
8	Heat source for flammable liquids				Electric heater or water bath
9	Why reflux is used				Heats without losing volatile substances
10	Condenser position in reflux				Vertical

Fold the Answer column behind the page. Answer each question from memory, then unfold and check. Repeat on a later day in the next Attempt column.
